

Comprehensive SEO & Generative Engine Optimization Audit

Grand Home Furnishings

Prepared by	Kiri Sanders, SEO & GEO Analyst Vici Media
Website	https://www.grandhf.com/
Audit date	2026-08-18 14:00
Pages analysed	9
Checkpoints evaluated	159/313
Collection method	Automated crawl

What we understand about your business

Read from your own pages during the crawl. If anything here is wrong, tell us — it usually means search engines have it wrong too.

Main sections	Living Room, Bedroom, Mattresses
Schema entities	Organization, BreadcrumbList

Where the issues sit

What we were able to measure

Executive Summary

Grand Home Furnishings publishes pages covering living room, bedroom and mattresses. We crawled 9 pages of www.grandhf.com on 2026-08-18 and worked through 159 checkpoints across 13 areas. The site scores 75/100 overall (Strong), with 49 items open. A further 12 checkpoints could not be assessed without access to your own accounts; those are listed as Need Access, not counted against you.

The single most consequential finding: The site is not fully served over HTTPS — 8 pages served over HTTP.

What's Working

Canonicalisation, Mobile SEO, HTML and code quality, and International SEO came back clean — 14 checkpoints across those areas with nothing outstanding.

Where the Ground Is

The most ground to make up is in structured data, which scores 49/100 with 7 of 10 assessed checkpoints needing work, including Website Schema, Article Schema and Product Schema. Product and Review markup drive the price, stock and star ratings that appear beside a retail listing. Without it you compete against listings that show all three.

The Five Things That Matter Most

This audit checked 159/313 checkpoints. These five are the ones we would fix first, in this order. Everything else is in the detail section and the appendix — real, but not where the return is.

1. The site is not fully served over HTTPS

Critical · HTTPS and security · effort: one server change

What we found. 8 pages served over HTTP. This shows up across 5 checkpoints, including Entire website uses HTTPS, No redirect or canonical to HTTPS homepage from HTTP version and Homepage does not use HTTPS encryption.

Why it matters. Browsers mark insecure pages, and Google has used HTTPS as a ranking signal for a decade. This is table stakes rather than optimisation.

What to do. Add a sitewide 301 from HTTP to HTTPS.

2. AI assistants cannot properly cite the site

High · AI search visibility (GEO) · effort: content plus one config change

What we found. robots.txt blocks 2 AI crawlers: GPTBot, ClaudeBot. These cannot cite the site. This shows up across 3 checkpoints, including llms.txt implementation and llms.txt not found.

Why it matters. Assistants are increasingly answering questions that used to start as searches. Being uncitable there removes you from that channel entirely, and it is a channel your competitors are already in.

What to do. Allow AI crawlers unless there is a deliberate policy reason not to.

3. Structured data is thin or missing

Medium · Structured data · effort: developer, days

What we found. Website schema is not implemented anywhere on the site. This shows up across 8 checkpoints, including Article Schema, Product Schema and FAQ Schema.

Why it matters. Product and Review markup drive the price, stock and star ratings that appear beside a retail listing. Without it you compete against listings that show all three.

What to do. Implement Website structured data to improve rich-result and AI-citation eligibility.

4. Pages are heavier and slower than they need to be

Medium · Site performance and Core Web Vitals · effort: developer, days

What we found. 8 of 8 pages are served without GZIP/Brotli compression — confirmed on 8 by comparing transferred bytes against document size. This shows up across 6 checkpoints, including Uncompressed pages, Browser caching, and Issues with uncached JavaScript and CSS files.

Why it matters. For a retailer this is measured in cart abandonment before it is measured in rankings.

What to do. Enable Brotli or GZIP compression at the server or CDN.

5. Measurement and conversion tracking have gaps

Medium · Analytics and tracking · effort: analytics, hours

What we found. Meta Pixel not detected in page scripts, inline JS, or response headers. This shows up across 6 checkpoints, including LinkedIn Insight Tag, Google Ads Conversion Tracking and Google Ads Remarketing Tag.

Why it matters. Without correct measurement, none of the other work can be proven to have paid off — which is how budgets get cut.

What to do. Implement Meta Pixel to close a measurement gap.

Audit Area Snapshot

All areas ranked weakest first. The three weakest are emphasised; hollow bars are areas we could not assess, which is not the same as an area that scored badly.

Coverage by area

Section	Score	Rating	Checked	Failing
Analytics & Tracking	64	Needs Improvement	11/12	6
Technical SEO	82	Strong	20/26	3
URL Structure & Site Architecture	50	Weak	15/17	2
HTTPS & Security	—	Not Assessed	3/11	3

AI SEO / GEO	64		Needs Improvement	7/8	5

Priority Issues

ID	Checkpoint	Severity	Finding & recommended action
URL-16	HTTPS consistency	Critical	8 pages served over HTTP.
SEC-08	Entire website uses HTTPS	Critical	8 pages are not served over HTTPS.
URL-06	No redirect or canonical to HTTPS homepage from HTTP version	Critical	HTTP homepage does not redirect to HTTPS. → Add a sitewide 301 from HTTP to HTTPS.
SEC-01	Homepage does not use HTTPS encryption	Critical	Homepage does not enforce HTTPS.
GEO-04	AI crawler accessibility	High	robots.txt blocks 2 AI crawlers: GPTBot, ClaudeBot. These cannot cite the site. → Allow AI crawlers unless there is a deliberate policy reason not to.
ONP-45	Lazy loading	Medium	36 of 36 images do not use loading="lazy". → Add loading="lazy" to below-the-fold images.
SEC-14	Links on HTTPS pages lead to HTTP pages	Medium	9 links on HTTPS pages point to HTTP URLs.
PERF-15	GZIP/Brotli compression	Medium	8 of 8 pages are served without GZIP/Brotli compression — confirmed on 8 by comparing transferred bytes against document size. → Enable Brotli or GZIP compression at the server or CDN.
PERF-04	Uncompressed pages	Medium	8 of 8 pages are served without GZIP/Brotli compression — confirmed on 8 by comparing transferred bytes against document size. → Enable Brotli or GZIP compression at the server or CDN.
PERF-16	Browser caching	Medium	8 pages send no Cache-Control or Expires header. → Set explicit Cache-Control policies for static assets.

ID	Checkpoint	Severity	Finding & recommended action
PERF-06	Issues with uncached JavaScript and CSS files	Medium	8 pages send no Cache-Control or Expires header. → <i>Set explicit Cache-Control policies for static assets.</i>
TECH-15	Pages are blocked from crawling	Medium	robots.txt contains 2 Disallow rules — confirm none block indexable commercial pages.
ONP-23	Unique title on every page	Medium	2 pages share 1 duplicated title tags. → <i>Write a unique, keyword-targeted title for each page.</i>
ONP-01	Issues with duplicate title tags	Medium	2 pages share 1 duplicated title tags. → <i>Write a unique, keyword-targeted title for each page.</i>

Keyword Rankings & Industry Benchmarks

The keywords this domain already ranks for in United States, ordered by position. **9 of 25** sit on page one. Volume and difficulty are third-party estimates, not measurements of this site.

Keyword	Pos.	Volume	Difficulty	Ranking URL
grand home furnishings	1	9,900	8	www.grandhf.com/
furniture roanoke va	3	2,400	24	www.grandhf.com/stores/roanoke
recliners near me	8	18,100	52	www.grandhf.com/recliners
sectional sofas	22	74,000	68	www.grandhf.com/sectionals
mattress sale	41	110,000	74	www.grandhf.com/mattresses

Prioritized Next Steps

Phase 1 — Immediate (0–30 days)

Issues that block indexing, create risk, or have broad sitewide impact. Fix these before any content work.

- No redirect or canonical to HTTPS homepage from HTTP version — Add a sitewide 301 from HTTP to HTTPS.
- HTTPS consistency — 8 pages served over HTTP.
- Homepage does not use HTTPS encryption — Homepage does not enforce HTTPS.
- Entire website uses HTTPS — 8 pages are not served over HTTPS.
- AI crawler accessibility — Allow AI crawlers unless there is a deliberate policy reason not to.

Phase 2 — Short term (30–90 days)

Meaningful improvements with moderate effort, including structured data and on-page optimisation.

- Pages returned 4XX status code — Fix or redirect broken URLs; update links that point to them.
- Internal links are broken — Repoint or remove links targeting error URLs.
- Pages are blocked from crawling — robots.txt contains 2 Disallow rules — confirm none block indexable commercial pages.
- Unique title on every page — Write a unique, keyword-targeted title for each page.
- Issues with duplicate title tags — Write a unique, keyword-targeted title for each page.
- Unique meta description — 2 pages share 1 duplicated meta descriptions.
- Pages have duplicate meta descriptions — 2 pages share 1 duplicated meta descriptions.
- Lazy loading — Add loading="lazy" to below-the-fold images.
- Meta Pixel — Implement Meta Pixel to close a measurement gap.
- LinkedIn Insight Tag — Implement LinkedIn Insight Tag to close a measurement gap.
- Google Ads Conversion Tracking — Implement Google Ads Conversion Tracking to close a measurement gap.
- Google Ads Remarketing Tag — Implement Google Ads Remarketing to close a measurement gap.

Phase 3 — Ongoing (90+ days)

Cleanup and best-practice work, best folded into normal release cycles.

- Title length optimized — 1 titles exceed 60 characters and will truncate in SERPs.
- Pages have too much text within the title tags — 1 titles exceed 60 characters and will truncate in SERPs.
- Proper length — 8 meta descriptions fall outside the 120–160 character range.
- One H1 per page — Reduce to a single H1 per page; demote the rest to H2.

- Pages have more than one H1 tag — Reduce to a single H1 per page; demote the rest to H2.
- Images don't have alt attributes — Add descriptive alt text to all non-decorative images.
- Descriptive filenames — 10 images use non-descriptive filenames (e.g. IMG_1234.jpg).
- Responsive images — 36 of 36 images lack a srcset for responsive delivery.
- Trust badges — No trust badges or accreditation imagery detected.

Appendix — Full Checkpoint Detail

The complete record, area by area. This is here so any finding above can be checked and so nothing is hidden — not because we expect it to be read start to finish. Every row carries its source and a raw value, so a disputed finding can be traced to the collector that produced it. **Need Access** means the check could not run — not that it failed.

Analytics & Tracking — 64/100 · Needs Improvement

ID	Checkpoint	Status	Evidence
ANA-06	Meta Pixel	Not Implemented	Meta Pixel not detected in page scripts, inline JS, or response headers. → <i>Implement Meta Pixel to close a measurement gap.</i>
ANA-07	LinkedIn Insight Tag	Not Implemented	LinkedIn Insight Tag not detected in page scripts, inline JS, or response headers. → <i>Implement LinkedIn Insight Tag to close a measurement gap.</i>
ANA-08	Google Ads Conversion Tracking	Not Implemented	Google Ads Conversion Tracking not detected in page scripts, inline JS, or response headers. → <i>Implement Google Ads Conversion Tracking to close a measurement gap.</i>
ANA-09	Google Ads Remarketing Tag	Not Implemented	Google Ads Remarketing not detected in page scripts, inline JS, or response headers. → <i>Implement Google Ads Remarketing to close a measurement gap.</i>
ANA-10	Call Tracking	Not Implemented	Call Tracking not detected in page scripts, inline JS, or response headers. → <i>Implement Call Tracking to close a measurement gap.</i>
ANA-12	Cookie Consent implementation	Not Implemented	Cookie Consent / CMP not detected in page scripts, inline JS, or response headers. → <i>Implement Cookie Consent / CMP to close a measurement gap.</i>
ANA-01	Google Tag Manager	Pass	Google Tag Manager detected on the site.
ANA-02	Google Analytics	Pass	Google Analytics 4 detected on the site.
ANA-04	Microsoft Clarity	Pass	Microsoft Clarity detected on the site.
ANA-05	Microsoft Bing Webmaster Tools	Pass	Bing Webmaster / Microsoft tooling signal detected.
ANA-11	Heatmap implementation	Pass	Heatmap / Session Recording detected on the site.
ANA-03	Google Search Console	Need Access	Cannot confirm Search Console access without client credentials. → <i>Request Search Console access from the client.</i>

Technical SEO — 82/100 · Strong

ID	Checkpoint	Status	Evidence
TECH-02	Pages returned 4XX status code	Fail	1 internal URLs returned a 4XX client error. → <i>Fix or redirect broken URLs; update links that point to them.</i>
TECH-06	Internal links are broken	Fail	1 internal links point to URLs that return an error. → <i>Repoint or remove links targeting error URLs.</i>

ID	Checkpoint	Status	Evidence
TECH-15	Pages are blocked from crawling	Warning	robots.txt contains 2 Disallow rules — confirm none block indexable commercial pages.
TECH-01	Pages returned 5XX status code	Pass	No server errors across 9 crawled URLs.
TECH-03	Pages couldn't be crawled	Pass	All discovered URLs were crawlable.
TECH-07	External links are broken	Pass	All 0 sampled external links resolved successfully.
TECH-08	Internal image is broken	Pass	No broken internal image references found.
TECH-13	Robots.txt file has format errors	Pass	robots.txt parses cleanly with no format errors.
TECH-14	Robots.txt not found	Pass	robots.txt present and served with HTTP 200.
TECH-18	robots.txt exists	Pass	robots.txt present and served with HTTP 200.
TECH-19	robots.txt syntax is valid	Pass	robots.txt syntax valid — User-agent group present.
TECH-23	Sitemap.xml not indicated in robots.txt	Pass	Sitemap location is declared in robots.txt.
TECH-25	Orphaned pages in sitemap	Pass	No orphaned pages detected — every page has at least one inbound link.
TECH-30	XML sitemap referenced in robots.txt	Pass	Sitemap location is declared in robots.txt.
TECH-31	Pages blocked by X-Robots-Tag (noindex HTTP header)	Pass	No pages blocked via X-Robots-Tag header.
TECH-32	Indexable pages use index,follow	Pass	8 of 8 crawled pages are indexable; 0 carry a noindex directive.
TECH-33	Non-indexable pages use noindex	Pass	No pages declare noindex.
TECH-34	Meta robots directives reviewed (index, noindex, follow, nofollow)	Pass	8 of 8 crawled pages are indexable; 0 carry a noindex directive.
TECH-36	Orphan pages identified	Pass	No orphaned pages detected — every page has at least one inbound link.
TECH-38	Link URLs are too long	Pass	No excessively long internal link URLs.
TECH-22	Sitemap.xml not found	Need Access	XML sitemap could not be fetched — the request failed to complete. Not evidence that a sitemap is missing.
TECH-28	XML sitemap exists	Need Access	XML sitemap could not be fetched — the request failed to complete. Not evidence that a sitemap is missing.
TECH-21	Sitemap.xml files have format errors	N/A	No sitemap was retrieved, so XML validity could not be assessed.
TECH-24	Incorrect pages found in sitemap.xml	N/A	No sitemap URLs to evaluate.
TECH-26	HTTP URLs in sitemap.xml for HTTPS site	N/A	No sitemap URLs were retrieved.
TECH-27	Sitemap.xml files are too large	N/A	No sitemap was retrieved.

URL Structure & Site Architecture — 50/100 · Weak

ID	Checkpoint	Status	Evidence
URL-06	No redirect or canonical to HTTPS homepage from HTTP version	Fail	HTTP homepage does not redirect to HTTPS. → Add a <i>sitewide 301</i> from HTTP to HTTPS.
URL-16	HTTPS consistency	Fail	8 pages served over HTTP.
URL-02	URLs with a temporary redirect	Pass	No temporary redirects encountered.
URL-03	URL with a permanent redirect	Pass	0 URLs are reached via a permanent (301/308) redirect.
URL-04	Redirect chains and loops	Pass	No redirect chains or loops detected.
URL-07	Page URLs are longer than 200 characters	Pass	All page URLs are within a reasonable length.
URL-08	Pages have too many parameters in their URLs	Pass	No URLs with excessive query parameters.
URL-09	Pages have underscores in the URL	Pass	URLs consistently use hyphens as word separators.
URL-10	SEO-friendly URLs	Pass	Site architecture is shallow — all pages within 3 clicks of home.
URL-11	URL hierarchy is logical	Pass	Site architecture is shallow — all pages within 3 clicks of home.
URL-12	Lowercase URLs	Pass	All URL paths are lowercase.
URL-13	Hyphens instead of underscores	Pass	URLs consistently use hyphens as word separators.
URL-14	URL length optimized	Pass	All page URLs are within a reasonable length.
URL-17	Redirect consistency	Pass	No redirect chains or loops detected.
URL-18	Canonical consistency	Pass	All 8 pages carry a self-referencing canonical tag.
URL-01	Pages have a WWW resolve issue	Need Access	Neither host variant could be resolved from the audit host, so <i>www/non-www</i> consistency could not be determined.
URL-15	WWW/non-WWW consistency	Need Access	Neither host variant could be resolved from the audit host, so <i>www/non-www</i> consistency could not be determined.

HTTPS & Security — —/100 · Not Assessed

ID	Checkpoint	Status	Evidence
SEC-01	Homepage does not use HTTPS encryption	Fail	Homepage does not enforce HTTPS.
SEC-08	Entire website uses HTTPS	Fail	8 pages are not served over HTTPS.
SEC-14	Links on HTTPS pages lead to HTTP pages	Fail	9 links on HTTPS pages point to HTTP URLs.
SEC-02	Issues with old security protocol	N/A	TLS version check not applicable — the site is not served over HTTPS. See SEC-01, which captures this as the root issue.
SEC-03	Issues with incorrect certificate name	N/A	Certificate name check not applicable — the site is not served over HTTPS. See SEC-01, which captures this as the root issue.

ID	Checkpoint	Status	Evidence
SEC-04	Issues with expiring or expired certificate	N/A	Certificate expiry check not applicable — the site is not served over HTTPS. See SEC-01, which captures this as the root issue.
SEC-05	Issues with mixed content	N/A	Mixed-content check not applicable — the site is not served over HTTPS. See SEC-01, which captures this as the root issue.
SEC-09	SSL certificate valid	N/A	Certificate expiry check not applicable — the site is not served over HTTPS. See SEC-01, which captures this as the root issue.
SEC-10	HSTS enabled	N/A	HSTS check not applicable — the site is not served over HTTPS. See SEC-01, which captures this as the root issue.
SEC-11	Secure TLS version	N/A	TLS version check not applicable — the site is not served over HTTPS. See SEC-01, which captures this as the root issue.
SEC-12	No mixed content	N/A	Mixed-content check not applicable — the site is not served over HTTPS. See SEC-01, which captures this as the root issue.

Canonicalization — 100/100 · Excellent

ID	Checkpoint	Status	Evidence
CANON-01	Pages with a broken canonical link	Pass	No broken canonical targets detected.
CANON-02	Pages have multiple canonical URLs	Pass	No pages declare more than one canonical URL.
CANON-04	Self-referencing canonical	Pass	All 8 pages carry a self-referencing canonical tag.
CANON-05	Canonicals point to indexable pages	Pass	All canonical targets are indexable.

Website Performance & Core Web Vitals — 53/100 · Weak

ID	Checkpoint	Status	Evidence
PERF-04	Uncompressed pages	Fail	8 of 8 pages are served without GZIP/Brotli compression — confirmed on 8 by comparing transferred bytes against document size. → <i>Enable Brotli or GZIP compression at the server or CDN.</i>
PERF-06	Issues with uncached JavaScript and CSS files	Fail	8 pages send no Cache-Control or Expires header. → <i>Set explicit Cache-Control policies for static assets.</i>
PERF-15	GZIP/Brotli compression	Fail	8 of 8 pages are served without GZIP/Brotli compression — confirmed on 8 by comparing transferred bytes against document size. → <i>Enable Brotli or GZIP compression at the server or CDN.</i>
PERF-16	Browser caching	Fail	8 pages send no Cache-Control or Expires header. → <i>Set explicit Cache-Control policies for static assets.</i>
PERF-18	Lazy loading	Fail	0 of 36 images (0%) use native lazy loading.

ID	Checkpoint	Status	Evidence
PERF-17	CDN usage	Not Implemented	No CDN signature detected in response headers or asset hosts. → <i>Front the site with a CDN to improve TTFB and global latency.</i>
PERF-01	Pages have slow load speed	Pass	All pages responded within 1.5s (worst 3ms).
PERF-02	Pages have low Text-to-HTML ratio	Pass	Text-to-HTML ratios are healthy across the site.
PERF-03	Pages have too large HTML size	Pass	All HTML documents are under 200KB (largest 4KB).
PERF-08	Pages use too many JavaScript and CSS files	Pass	Script counts are reasonable (max 3 per page).
PERF-10	Core Web Vitals evaluated	Need Access	Core Web Vitals assessment unavailable — PageSpeed Insights API unreachable from the audit host (PSI collection disabled).
PERF-11	Largest Contentful Paint (LCP)	Need Access	Largest Contentful Paint (LCP) unavailable — PageSpeed Insights API unreachable from the audit host (PSI collection disabled).
PERF-12	Interaction to Next Paint (INP)	Need Access	Interaction to Next Paint (INP) unavailable — PageSpeed Insights API unreachable from the audit host (PSI collection disabled).
PERF-13	Cumulative Layout Shift (CLS)	Need Access	Cumulative Layout Shift (CLS) unavailable — PageSpeed Insights API unreachable from the audit host (PSI collection disabled).
PERF-14	Time To First Byte	Need Access	Time to First Byte (TTFB) unavailable — PageSpeed Insights API unreachable from the audit host (PSI collection disabled).
PERF-19	Image optimization	Need Access	Image optimisation unavailable — PageSpeed Insights API unreachable from the audit host (PSI collection disabled).

On-Page SEO — 54/100 · Weak

ID	Checkpoint	Status	Evidence
ONP-01	Issues with duplicate title tags	Fail	2 pages share 1 duplicated title tags. → <i>Write a unique, keyword-targeted title for each page.</i>
ONP-04	Pages have too much text within the title tags	Fail	1 titles exceed 60 characters and will truncate in SERPs.
ONP-05	Pages have duplicate meta descriptions	Fail	2 pages share 1 duplicated meta descriptions.
ONP-08	Pages have more than one H1 tag	Fail	1 pages contain more than one H1 tag. → <i>Reduce to a single H1 per page; demote the rest to H2.</i>
ONP-14	Images don't have alt attributes	Fail	19 of 36 images are missing alt attributes across 4 pages. → <i>Add descriptive alt text to all non-decorative images.</i>
ONP-23	Unique title on every page	Fail	2 pages share 1 duplicated title tags. → <i>Write a unique, keyword-targeted title for each page.</i>
ONP-26	Title length optimized	Fail	1 titles exceed 60 characters and will truncate in SERPs.
ONP-27	Unique meta description	Fail	2 pages share 1 duplicated meta descriptions.

ID	Checkpoint	Status	Evidence
ONP-30	Proper length	Fail	8 meta descriptions fall outside the 120–160 character range.
ONP-32	One H1 per page	Fail	1 pages contain more than one H1 tag. → Reduce to a single H1 per page; demote the rest to H2.
ONP-42	Descriptive filenames	Fail	10 images use non-descriptive filenames (e.g. IMG_1234.jpg).
ONP-44	Responsive images	Fail	36 of 36 images lack a srcset for responsive delivery.
ONP-45	Lazy loading	Fail	36 of 36 images do not use loading="lazy". → Add loading="lazy" to below-the-fold images.
ONP-02	Pages don't have title tags	Pass	Every crawled page has a title tag.
ONP-03	Pages don't have enough text within the title tags	Pass	No under-length title tags.
ONP-06	Pages don't have meta descriptions	Pass	Every page has a meta description.
ONP-07	Pages have duplicate H1 and title tags	Pass	No pages duplicate H1 and title text.
ONP-09	Pages have duplicate content issues	Pass	No duplicate content clusters detected.
ONP-10	Pages have a low word count	Pass	No thin-content pages detected.
ONP-11	Pages contain too much content	Pass	No pages are excessively long.
ONP-12	Pages have low semantic HTML usage	Pass	Text-to-HTML ratios are healthy.
ONP-15	Pages have only one incoming internal link	Pass	All pages have multiple inbound internal links.
ONP-16	Pages need more than 3 clicks to be reached	Pass	All pages are reachable within 3 clicks.
ONP-17	Links have no anchor text	Pass	All internal links carry anchor text.
ONP-18	Links have non-descriptive anchor text	Pass	Internal anchor text is descriptive throughout.
ONP-19	Outgoing internal links contain nofollow attribute	Pass	No internal links are nofollowed.
ONP-20	Pages have too many on-page links	Pass	No pages exceed the on-page link threshold.
ONP-21	Outgoing external links contain nofollow attributes	Pass	0 of 0 outbound external links use rel=nofollow.
ONP-22	Links to external pages/resources returned a 403 HTTP status code	Pass	No external links returned a 403 response.
ONP-31	Pages don't have an H1 heading	Pass	Every page has an H1 heading.
ONP-33	Logical H2-H6 hierarchy	Pass	Heading hierarchy is logical on all pages.
ONP-46	Logical internal linking	Pass	72 internal links across 8 pages (avg 9.0 per page).

ID	Checkpoint	Status	Evidence
ONP-47	Contextual anchors	Pass	72 internal links across 8 pages (avg 9.0 per page).
ONP-48	No orphan pages	Pass	No orphaned pages detected — every page has at least one inbound link.

Mobile SEO — 100/100 · Excellent

ID	Checkpoint	Status	Evidence
MOB-01	Pages have no viewport tag	Pass	All pages declare a viewport meta tag.
MOB-02	Pages are missing the viewport width value	Pass	All viewport tags specify a width.
MOB-07	Mobile viewport configured	Pass	All pages declare a viewport meta tag.

Structured Data (Schema) — 49/100 · Weak

ID	Checkpoint	Status	Evidence
SCHEMA-10	Rich Results validation	Fail	1 of 8 pages (12%) carry structured data, across 2 distinct types.
SCHEMA-03	Website Schema	Not Implemented	WebSite schema is not implemented anywhere on the site. → <i>Implement WebSite structured data to improve rich-result and AI-citation eligibility.</i>
SCHEMA-05	Article Schema	Not Implemented	Article schema is not implemented anywhere on the site. → <i>Implement Article structured data to improve rich-result and AI-citation eligibility.</i>
SCHEMA-06	Product Schema	Not Implemented	Product schema is not implemented anywhere on the site. → <i>Implement Product structured data to improve rich-result and AI-citation eligibility.</i>
SCHEMA-07	FAQ Schema	Not Implemented	FAQPage schema is not implemented anywhere on the site. → <i>Implement FAQPage structured data to improve rich-result and AI-citation eligibility.</i>
SCHEMA-08	Review Schema	Not Implemented	Review schema is not implemented anywhere on the site. → <i>Implement Review structured data to improve rich-result and AI-citation eligibility.</i>
SCHEMA-09	LocalBusiness Schema	Not Implemented	LocalBusiness schema is not implemented anywhere on the site. → <i>Implement LocalBusiness structured data to improve rich-result and AI-citation eligibility.</i>
SCHEMA-01	Structured data items are invalid	Pass	All JSON-LD blocks parse as valid JSON.
SCHEMA-02	Organization Schema	Pass	Organization schema found on 1 pages (Organization).
SCHEMA-04	Breadcrumb Schema	Pass	BreadcrumbList schema found on 1 pages (BreadcrumbList).

International SEO — 100/100 · Excellent

ID	Checkpoint	Status	Evidence
INTL-04	Pages have no hreflang and lang attributes	Pass	All pages declare a lang attribute.

ID	Checkpoint	Status	Evidence
INTL-07	Language targeting	Pass	Language targeting: en-US (8 pages)
INTL-01	Issues with hreflang values	N/A	No hreflang annotations found — expected for a single-locale site.
INTL-06	hreflang implementation	N/A	No hreflang annotations found — expected for a single-locale site.

HTML & Code Quality — 100/100 · Excellent

ID	Checkpoint	Status	Evidence
HTML-01	Pages don't have character encoding declared	Pass	All pages declare a character encoding.
HTML-02	Pages don't have doctype declared	Pass	All pages declare the HTML5 doctype.
HTML-03	Pages contain frames	Pass	No framesets detected.
HTML-07	Character encoding declared	Pass	All pages declare a character encoding.
HTML-08	Proper doctype	Pass	All pages declare the HTML5 doctype.

E-E-A-T Audit — 80/100 · Strong

ID	Checkpoint	Status	Evidence
EEAT-07	Author pages	Not Implemented	No Author pages found in the crawl. → <i>Publish a Author pages — a baseline trust signal for E-E-A-T.</i>
EEAT-17	Refund Policy (if applicable)	Not Implemented	No Refund / Return Policy found in the crawl. → <i>Publish a Refund / Return Policy — a baseline trust signal for E-E-A-T.</i>
EEAT-18	Disclosure pages	Not Implemented	No Disclosure page found in the crawl. → <i>Publish a Disclosure page — a baseline trust signal for E-E-A-T.</i>
EEAT-24	Trust badges	Not Implemented	No trust badges or accreditation imagery detected.
EEAT-12	Contact page	Pass	Contact page present (1 URL(s)).
EEAT-13	About page	Pass	About page present (1 URL(s)).
EEAT-15	Privacy Policy	Pass	Privacy Policy present (1 URL(s)).
EEAT-16	Terms & Conditions	Pass	Terms & Conditions present (1 URL(s)).
EEAT-19	HTTPS trust	Need Access	HTTPS trust not assessed — the TLS handshake could not be completed, which means the host was unreachable rather than insecure.

AI SEO / GEO — 64/100 · Needs Improvement

ID	Checkpoint	Status	Evidence
GEO-04	AI crawler accessibility	Fail	robots.txt blocks 2 AI crawlers: GPTBot, ClaudeBot. These cannot cite the site. → <i>Allow AI crawlers unless there is a deliberate policy reason not to.</i>

ID	Checkpoint	Status	Evidence
GEO-19	Structured data completeness	Fail	2 of 8 core schema types implemented. Missing: WebSite, Article, Product, FAQPage, Review, LocalBusiness.
GEO-01	llms.txt not found	Not Implemented	//llms.txt not found (HTTP 404). → Publish an //llms.txt describing the site's key pages and entities for AI crawlers.
GEO-03	llms.txt implementation	Not Implemented	//llms.txt not found (HTTP 404). → Publish an //llms.txt describing the site's key pages and entities for AI crawlers.
GEO-10	FAQ optimization	Not Implemented	No FAQPage or QAPage schema found anywhere on the site. → Add FAQ sections with FAQPage schema — the highest-leverage format for AI Overview and chatbot citation.
GEO-06	AI-readable HTML	Pass	100% of pages expose a heading structure machine parsers can follow.
GEO-08	Clear heading hierarchy	Pass	Heading hierarchy is clean sitewide.
GEO-02	llms.txt file has formatting issues	N/A	No //llms.txt to validate.

How This Audit Was Carried Out

Stating the method is part of the finding. A number without a method behind it cannot be argued with, checked, or repeated next quarter.

Collection	Automated crawl of 9 pages from https://www.grandhf.com/, following internal links and the XML sitemap.
Framework	313 checkpoints across 16 areas, covering technical SEO, on-page, structured data, performance, security, E-E-A-T and generative-engine visibility.
What we measured	132 checkpoints answered from direct observation of your site and third-party data.
What we could not measure	166 checkpoints need access to accounts only you control — Search Console and Analytics, chiefly. They are reported as Need Access and are excluded from scoring rather than counted as failures. Granting read-only access closes most of that gap.
Not applicable	15 checkpoints do not apply to a site of this shape and are excluded.
Scoring	Each area scores out of 100 from its assessed checkpoints, weighted by severity. Areas with too little assessable data are marked Not Assessed rather than scored low — an unmeasured area is not a failing one.

Questions about this report

Any finding here can be walked through line by line, and anything you disagree with is worth raising — a wrong finding usually means we saw something a search engine also saw.
